

## SSi Features & Benefits

---

### Auto-Optimization as Standard

Our systems were designed and built with Intelligence integrated in the design. They integrate state-of-the-art software called Smart Speed logic, allowing our systems to constantly speed up or slow down based upon the wells' changing conditions, meaning *auto-optimization on every stroke*.

This ensures maximum efficiency, reduced downtime, and an overall increase in well productivity.

### Extended Stroke Length

Designed with and for long stroke applications, our systems deliver slower longer stroking. This reduces wear & tear on downhole equipment, extends operational life, and lowers maintenance costs.

### Ultra Durable Construction

Built with high-grade materials and precision engineering, SSi's rod lifting systems withstand extreme operating conditions, ensuring reliability even in the harshest environments. Whether operating in the midst of a Northern Canada winter, or in the extremely hot conditions of the Middle East, our lift systems are built to last.

### Energy Efficient Design

Engineered to minimize energy consumption while maintaining optimal performance, our systems help reduce operational costs and environmental impact.
